Computing

Our children are growing up in an increasingly technological world, and it is essential that they become familiar, confident, and fluent with a wide range of devices.

The school is well resourced to deliver the Computing curriculum, featuring a dedicated computer suite alongside mobile iPad trolleys to support learning both in class and outdoors. We are currently rolling out a 1:1 Chromebook programme, providing individual access for pupils in Key Stage 2 (currently implemented in Years 3 and 4), which will progressively expand across the rest of the school. This blend of technology embeds core digital skills across all areas of the curriculum, fostering independence and preparing pupils for future learning.

Interactive whiteboards in every classroom enable children to actively participate in whole class learning. Platforms such as Seesaw are utilised to showcase pupil achievements and maintain strong school to home links.

All classes connect via a secure broadband network with robust filtering systems to prevent access to unsuitable material. Online safety and digital wellbeing are taught regularly, ensuring pupils learn how to navigate the digital world safely, ethically, and responsibly.
